NTS **ON DEMAND
NETWORK**

ON DEMAND NETWORK

Digital transformation and growing security demands require flexible business networks. To keep up to date, swift adaption to technological progress is necessary. Companies not only have to be able to react to business requirements such as office extensions or the opening of a new location, but they also need to be able to ensure hybrid work models, Cloud and IoT integration or to assure compliance and conformity.

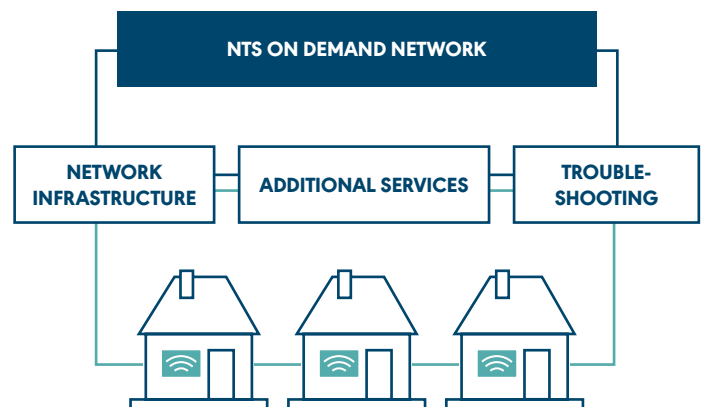

Due to these framework conditions, companies are increasingly procuring their services as "...as a service".¹ Thus, initially required large investments (CAPEX) will become continuous operational expenses (OPEX) that are easier to finance. That way, regular adaptations can be implemented much easier.

NTS ON DEMAND NETWORK² by NTS is a solution that keeps the network equipment up to date and supported whilst controlling the budget. NTS ON DEMAND NETWORK is growing with the requirements of the customer, completely without hidden costs and it is upgradeable: You only pay for what is being used.

In a symbolic sense, NTS ON DEMAND NETWORK is a rental building with additional benefits. The customer themselves use and operate the network infrastructure (rental building) and view the current status online of their network inventory. In the case of an incident, they get in touch with the "facility management", which in this case would be NTS. The NTS experts immediately take care of the troubleshooting and – if required – also coordinate the RMA. Expansions are possible during the service life as well. Thus, the network can grow with the business in a flexible and fast way.

YOUR BENEFITS AT A GLANCE

- Only pay for what is used
- Bundle fee: network infrastructure and services for a fixed price per interval
- No financial burden for the balance sheet (Opex instead of Capex) and optimization of the liquidity
- Flexibility during growth as there is no need to budget large investments
- Better budget planning thanks to predictable IT costs
- Individual sizing for companies of any size, no rigidly defined packages
- Installments can be tax deducted as operating expenses
- 24x7 helpdesk with German-/English-speaking network experts
- Reliable partner with long-standing experience in the network area and certified partnerships with global technology leaders

¹Until 2025, 20% of all switches in companies will be procured via an as-a-service model (i.e., hardware as a service), whereas it was almost zero in 2020.

²For now, this service is only offered in Austria.

RELAX, WE CARE

Have we attracted your attention? We offer you tailor-made solutions and individual support. We are always here for your questions. Thus, you can continue to focus on your core business, while we develop future-oriented solutions for you.

ON DEMAND NETWORK

Billing is done in regular intervals for the rented network environment. This basically means:

NTS ON DEMAND NETWORK
Financed hardware ¹
+ Implementation at the beginning
+ break and fix and troubleshooting support with NTS Standard 24x7
+ online inventory display with NTS INVENTORY4ALL
with billing based on usage

NTS Support Services support NTS customers in case of a fault. The **NTS Standard 24x7²** support that is included ensures:

- 24x7 availability (email and phone)
- Case handling and RMA processing for hardware replacements
- NTS as an interface between manufacturer and customer
- Fault analysis and troubleshooting (remote and - if required - on site)
- Provision of software versions

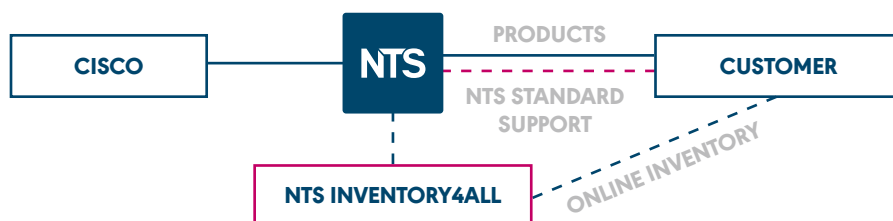

For all this, the NTS experts of the Operation Center (OC)³ are available around-the-clock.

By creating an inventory of the network infrastructure and due to centrally saved configuration information, **NTS INVENTORY4ALL (I4ALL)** is an efficient tool for the transparency and the control of the network inventory. I4ALL takes care of the continuous capturing of technical data (for instance: serial numbers, modules and interfaces) of the managed devices and it amends these with lifecycle information (service level, EoX data) by NTS and Cisco.

Additionally, I4ALL generates configuration backups (for instance: running config and startup config) of devices that are supported and that are managed in the inventory. The backups can be retrieved in the NTS portal in a quick and simple manner and can shorten the configuration time during the recovery.

Name	IP Address	Serial No.	Model	Location	Backup Status	Class	Vendor	Software	Substatus	First seen	Last seen
...

Digital online inventory with I4ALL

¹Based on the currently valid rental terms and conditions. Hardware insurance must be taken out by the customer.

²Services according to the NTS general support conditions.

³Further details about our Operations Center can be found on the homepage support at NTS.
