PRIVATE CLOUD AS A SERVICE

Do you want to, or do you have to keep control of your data in your own hands for legal, regulatory, or technical reasons? You like to respond flexibly to changes, keep your operational expenses at a minimum and use all advantages of a cloud environment – including a billing based on usage, whilst not compromising on your high demands related to access and data security. NTS Private Cloud as a Service is not an either-or decision between data center or cloud. Businesses benefit from a dedicated on-premises Infrastructure as a Service (IaaS) that has all the features of a cloud – made available in one’s own data center or at a local hosting partner.

NTS PRIVATE CLOUD AS A SERVICE

NTS Private Cloud is the perfect match of two worlds. You benefit from a fully integrated private cloud infrastructure as with an on-premises data center in your company or in your data center. The design of a highly available data center Infrastructure as a Service (IaaS) will be individually defined and designed as per customer requirements. Additionally, NTS Private Cloud as a Service is based on a modular and customer-specific adaptable concept as a best practice recommendation.

Still looking for a comprehensive carefree package? NTS experts ensure a smooth operation around-the-clock – with an individually matched NTS Private Cloud as a Service solution.

In case you already have existing infrastructures or components, NTS optionally checks if they can be taken over to contribute to an implementation that optimizes the usage of resources.

YOUR ADVANTAGES AT A GLANCE

- Data security and data sovereignty
- Minimizing of risks
- On-premises data center Infrastructure as a Service (IaaS)
- Billing based on usage
- No initial hardware investments
- “Private” installation site at the customer
- Standardization by automation
- Scalable architecture for a flexible adaptation to changes in the business
- 24x7 operational control by NTS
- Local contact person
- Partnership with leading manufacturers of technology

With NTS, you obtain the solution that suits your needs perfectly, no matter if NTS Private Cloud as a Service is implemented directly at your company’s location or at an external data center.

A highly certified NTS team supports during the planning, it takes future challenges into account and enables an optional subsequent upgrading to a hybrid cloud. That way, computing power can for instance be outsourced at short notice to react flexibly to growing business requirements.

**RELAX,
WE CARE**

You’re never left alone as we assume the responsibility for monitoring your systems, processes, and their analysis.

Precisely to the extent that you require, just in that style that you desire.

PRIVATE CLOUD AS A SERVICE

INFRASTRUCTURE WITHOUT INITIAL INVESTMENT COSTS – OPEX INSTEAD OF CAPEX

With NTS Private Cloud as a Service you receive the infrastructure based on a billing scheme that is usage-based. Thus, no initial investment costs need to be allowed for, and the IT budget can be appropriately planned in the long run. For the billing, the storage (TB) and the processing performance (GB RAM) based on the pay-per-use scheme is used, which can be adapted hassle-free to growing requirements.

AUTOMATION – STANDARDIZATION AND ERROR REDUCTION

Automation provides the basis for a standardized approach during infrastructure changes. It reduces the potential for error and increases the IT security. NTS experts assist with tackling the challenges depending on the company-specific requirements.

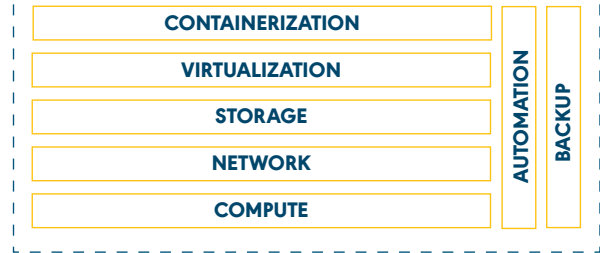

SCALING AND EFFICIENT MANAGEMENT

NTS Private Cloud as a Service not only offers a demand-oriented scaling of the storage and the computing power. With Kubernetes, a modern container orchestration platform that is independent of the underlying infrastructure, software development platforms as well as a container-based application software can be set up. The container platform is offered optionally, and we support you from the consulting phase all the way to the implementation.

With NTS Private Cloud as a Service you receive a complete back up management so that you can be assured that your business data is secured and protected from ransomware attacks.

PRIVATE CLOUD AS A SERVICE

Modular structure

FOR MORE FREEDOM. SECURE, FLEXIBLE, MODULAR AND INDIVIDUAL

By taking over the operation by NTS as a local or regional service provider, all data remains at the customer even during service rendering. Thus, the data sovereignty remains with you, and you comply with all legal regulations regarding data protection requirements.

Your IT resources will be freed up for other tasks that advance your business as demanding operational hassle and maintenance processes are all managed by NTS. An attractive and transparent billing scheme relieves you from initial investment costs and provides you with a billing based on usage. State-of-the-art technologies and containerization technologies help reduce costs by optimizing processes.

The modular approach allows for an individual customer-specific design with state-of-the-art technologies from leading manufacturers and flexible scaling to match changing requirements.
